DT Article; Journal FS LIFE LA ENGLISH REC Reference Count: 45 *ABSTRACT IS AVAILABLE IN THE ALL AND IALL FORMATS* => d 2,4 abANSWER 2 OF 6 HCAPLUS COPYRIGHT 2002 ACS L_2 AΒ A luminescence assay system is provided for detecting at least two kinds of luminescence derived from an organism by one process. The system comprises one luminescence with a max. luminescence wavelength at 615-625nm at pH8 and a half width less than 60nm, and another luminescence with a max. luminescence wavelength at 460-550nm at pH8. The system is based on the oxidn. reaction of a luminescence substrate (e.g, luciferin) via an enzyme (e.g., luciferase) synthesized from a vector contg. a part of a luminescence gene of a luminescence organism (e.g., Phrixothrix). A method and a kit used for this luminescence assay system are also claimed. ANSWER 4 OF 6 L2 MEDLINE DUPLICATE 3 AB Chimeric proteins were produced using the green light-emitting luciferase of Phrixothrix vivianii (PxGr: lambda max = 548 nm) and the red light-emitting luciferase of Phrixothrix hirtus (PxRe: lambda max = 623 nm). Constructs containing residues 1-344 of the red light-emitting luciferase with residues 345-545 of the green light emitting one emitted red light (PxReGr; lambda max = 613 nm), while the reverse emitted green light (PxGrRe; lambda max = 552 nm). From these results we conclude that the region 1-344 determines the color of bioluminescence (BL) in railroad-worm luciferases, and that residues above 344 are not involved. The substitution R215S in the green light-emitting luciferase (PxGr)

resulted in a approximately 40 nm redshift on the BL spectrum (lambda max

shown to cause blueshifts in the BL spectra and stimulate the activity of

= 585 nm) and an associated decrease of activity, whereas the same

mutation in PxRe luciferase had little effect. Guanidine was

the red-emitting luciferas (from lambda max = 623 to lamb max = 600 nm) and in PxGr Rz15S (from lambda max = 585 to lambda max = 560 nm) mutant luciferase, but not in the green-emitting luciferases, suggesting that guanidine can simulate positively charged residues involved in BL color determination.

=> dis his
